Assignment 1

For each of the chemicals in your group use explore TOXNET and/or other resources to determine what type of information is available. Take note of the toxicity end-points being characterized and do your best to find data and endpoints that you can compare across chemicals. Where available tabulate this information by endpoint.

After collecting this data write a brief (one paragraph) summary ranking of the chemical. Submit this summary and any tabulated data to Marty (marty_m@berkeley.edu) and Chris (vulpe@berkeley.edu) before class.

Note: I realize that there is a lot of information out there and I don’t expect you to look at it all. I want you to look at enough so that you feel like you have a sense for what is available.

Note: One Summary per group.
